Prof. Ervin Laszlo - Welcome to the Institute! (1:53 Minutes Video)

This weekend a group of physicists and researchers who work on the frontier of science and consciousness gathered at The Laszlo Institute of New Paradigm Research, in Bagni di Lucca to share theory and research. There were presentations that resolved the incompatibilities between General Relativity and Quantum theory, there was a presentation proposing the Universe does not have mathematical underpinnings but something else at its base, there was a presentation on self-awareness and its relationship to brain coherence, there was a biofield perspective on weak electromagnetic field bioeffects and their relationship to quantum biology and consciousness, there was much about nonlocal consciousness, and information, INFORMATION as the non space time foundation of reality. This just scratches the surface of the surface of the field of discussion this past week-end. We interviewed the speakers and will soon share them through our YouTube series "Confessions of a Time Monk" which will launch in February.

Stephan A. Schwartz, <http://www.schwartzreport.net/> , one of the founders of the remote viewing protocol, amongst a myriad of other rather exceptional contributions, spoke at the Symposium for New Paradigm Research this weekend. He is an amazing and entertaining raconteur on an astounding variety of research subjects.
